

Five Ways to: Reduce your Vehicle's Environmental Impact

How it happens

When we park, our cars and trucks leave stains of oil, grease, and transmission fluid on driveways and parking lots. Less visible are the tiny exhaust particles that gradually settle out of the air or come down with the rain or snow. What happens to all this “car dirt” when it rains? It washes off the pavement, goes down into the gutter, flows through the storm drains, and eventually makes it to our lakes and streams.

How to make a difference

1. Recycle oil
2. Use commercial car washes
3. Repair leaks
4. Recycle antifreeze
5. Return used batteries
